	 This report is the international preliminary examination report, established by this International Preliminary Examining Authority under Article 35 and transmitted to the applicant according to Article 36. 					
2. Th	nis REPORT consists of a total o	ng this cover sheet.				
3. Th	nis report is also accompanied by	ANNEXES, comprising:				
a.	(sent to the applicant of	and to the International Bureau	ı) a total of	sheets, as follows:		
	sheets of the description, claims and/or drawings which have been amended and are the basis for this report and/or sheets containing rectifications authorized by this Authority (see Rule 70.16 and Section 607 of the Administrative Instructions).					
	sheets which supersede earlier sheets, but which this Authority considers contain an amendment that goes beyond the disclosure in the international application as filed, as indicated in item 4 of Box No. I and the Supplemental					
	Box.					
6.	b. (sent to the International Bureau only) a total of (indicate type and number of electronic carrier(s))					
, containing a sequence listing and/or tables related thereto, in computer readable form only, as indicated in the Supplemental Box Relating to Sequence Listing (see						
	Section 802 of the Admi					
4. Th	his report contains indications re	lating to the following items:				
	Box No. I Basis of	the report				
	Box No. II Priority					
	Box No. III Non-est	ablishment of opinion with reg	ard to novelty, invent	tive step and industrial applicability		
	Box No. IV Lack of	unity of invention				
		Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement				
E	Box No. VI Certain documents cited					
	Box No. VII Certain defects in the international application					
	Box No. VIII Certain observations on the international application

2. Citations and explanations (Rule 70.7)

Document 1: Chemical Physics Letters, 4 June 2003, Vol. 374, No. 1 and 2, pages 132 to 136

Claims 1 to 8

The inventions set forth in claims 1 to 8 do not involve an inventive step in the light of document 1 cited in the international search report.

Document 1 indicates that carbon nanotubes (CNT) in hydrogen peroxide solution are irradiated with laser light having a specific wavelength, thereby selectively removing CNT having an energy gap equivalent to said specific wavelength (see page 135, "4. Discussion", lines 3 to 12 in particular). Here, CNT having an energy gap equivalent to the wavelength of irradiated light are understood to correspond to CNT having a density of states resonating with the light used for irradiation.

Moreover, document 1 indicates that CNT having a specific size are selectively removed as proof that there is a difference in the way in which the peak declines, comparing the Raman spectrum generated by 514.5nm excitation light and the Raman spectrum generated by 488nm excitation light after being irradiated with 488nm laser light. Said lighting method is the same as that

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

disclosed in the description of this application.

Document 1 also suggests that if the oxidization time is long, CNT with other sizes are also removed (see the aforementioned "4. Discussion", lines 12 to 16). Said disclosure suggests that selectivity is obtained by using differences in density of states caused by the chirality of CNT.

In addition, in the same way as if an oxidizing agent was used, it is obvious that the oxidation of the substances in an oxygen atmosphere advances, therefore carrying out the oxidation in the CNT structural control method set forth in document 1 in an oxygen atmosphere rather than in hydrogen peroxide would merely represent a design change which a person skilled in the art could accomplish as necessary.
